INTERNSHIP REPORT

ON

CYBER SECURITY INTERNSHIP

Submitted by

ANUJ LAVANIYA

Roll Number: 25SCS1003000594

Programme: B.Tech CSE

Internship Designation: Cyber Security Intern

Organization: Codec Technologies Pvt. Ltd.

Mode: Pan India, Hybrid

Internship Period: 24/06/2026 to 24/07/2026

Academic Session: 2026–27

CERTIFICATE

This is to certify that the internship report titled “CYBER SECURITY INTERNSHIP” has been prepared by Anuj Lavaniya, Roll Number 25SCS1003000594, as an academic record of the internship experience with Codec Technologies Pvt. Ltd. The internship certificate confirms completion of the 1 Month AICTE & ICAC Approved internship program as a Cyber Security Intern, conducted from 24/06/2026 to 24/07/2026.

Particular	Details
Student Name	ANUJ LAVANIYA
Roll Number	25SCS1003000594
Designation	Cyber Security Intern
Organization	Codec Technologies Pvt. Ltd.
Duration	24/06/2026 to 24/07/2026

Authorized / Faculty Signature: _____

Date: _____

CANDIDATE'S DECLARATION

I, Anuj Lavaniya, hereby declare that this internship report titled “CYBER SECURITY INTERNSHIP” has been prepared for academic purposes based on the internship offer letter and internship certificate supplied for the program. The report presents the internship details, organization profile, objectives, scope, learning areas, methodology, and outcomes in a structured academic format.

Roll No.: 25SCS1003000594

Signature: Anuj Lavaniya

ACKNOWLEDGEMENT

I express my sincere gratitude to Codec Technologies Pvt. Ltd. for providing the opportunity to undertake an internship as a Cyber Security Intern. The internship program provided an opportunity to gain industry-level knowledge and valuable professional skills.

I am thankful to the university faculty, internship coordinators, project supervisors, and everyone who supported and guided me during the internship period. I also acknowledge the assigned projects and training tasks, weekly performance reviews, and professional exposure described in the internship offer letter.

1. INTERNSHIP OVERVIEW

Particular	Details
Organization	Codec Technologies Pvt. Ltd.
Designation	Cyber Security Intern
Location & Mode	Pan India, Hybrid
Duration	24/06/2026 to 24/07/2026
Reporting	Assigned Project Head(s)
Program	1 Month AICTE & ICAC Approved internship program

The internship offer letter identifies the role as Cyber Security Intern, with Pan India/Hybrid mode, a duration from 24/06/2026 to 24/07/2026, and reporting to assigned project head(s). The program required completion of assigned projects and training tasks on the organization's platform and via email.

Program Structure

- Industry-oriented learning and practical exposure.
- Assigned projects and training tasks.
- Weekly performance reviews conducted by the project supervisor.
- Possible scholarship consideration for exceptional interns based on weekly performance.

2. ORGANIZATION PROFILE

Codec Technologies is described in the offer letter as a global platform dedicated to empowering learners and connecting diverse talent to create meaningful career opportunities worldwide.

The offer letter further states that Codec Technologies delivers dedicated IT and business consultancy services across 27+ countries, supporting global innovation and strategic growth.

The internship program is presented as an immersive experience intended to provide industry-level knowledge and valuable skills through practical assignments and training activities.

Professional Environment

- Pan India, hybrid mode of internship.
- Reporting to assigned project head(s).
- Project and training activities through the organization's platform and email.
- Weekly performance reviews conducted by the project supervisor.

3. INTERNSHIP OBJECTIVES

- To understand the practical relevance of Cyber Security in an industry-oriented environment.
- To gain exposure through assigned cyber-security projects and training tasks.
- To develop structured problem-solving and analytical thinking skills.
- To understand core security principles such as confidentiality, integrity, availability, authentication, and risk awareness.
- To improve technical communication, documentation, and professional discipline.
- To connect academic Computer Science learning with professional cyber-security practice.

4. SCOPE OF THE INTERNSHIP

The supplied offer letter and internship certificate establish the internship domain and designation as Cyber Security Intern. They do not specify individual programming languages, security tools, platforms, vulnerabilities, client systems, or named projects. Accordingly, this report describes the technical scope at a general cyber-security learning and professional level rather than claiming use of a particular proprietary technology stack.

Scope Boundaries

- Cyber Security internship and related assigned activities.
- Project-based and training-based learning.
- Professional communication through platform and email.
- Evaluation through project-supervisor reviews.
- General exposure to cyber-security concepts, security awareness, and structured problem solving.

5. CYBER SECURITY LEARNING AREAS

Because the supplied documents do not identify a specific security technology stack, the following areas are presented as general learning domains relevant to a Cyber Security internship rather than as claims about a particular implementation.

- Information security fundamentals and the CIA triad.
- Threat awareness: understanding common categories of cyber threats and attack surfaces.
- Authentication and access control concepts.
- Network and application security awareness.
- Vulnerability identification and risk-oriented thinking.
- Security monitoring, incident awareness, and documentation.
- Safe handling of information and responsible security practices.

Responsible Security Practice

Professional cyber-security work requires authorized access, careful handling of information, validation of findings, responsible disclosure, documentation, and awareness of system limitations. This report does not attribute any specific security tool, exploit, vulnerability, or client environment to the internship because those details are not stated in the supplied documents.

6. METHODOLOGY

Stage	Description
1. Problem Understanding	Identify the security objective, scope, expected output, constraints, and task instructions.
2. Asset / Input Understanding	Review the authorized inputs, systems, information, or scenarios relevant to the task.
3. Risk Analysis	Consider possible threats, weaknesses, impact, and security priorities.
4. Task Execution	Complete assigned project or training activities according to instructions and authorization.
5. Validation & Evaluation	Review findings, verify observations, and assess results against the task objective.
6. Review & Documentation	Use supervisor feedback and record approach, observations, learning, limitations, and outcomes.

This methodology is a structured representation of a cyber-security internship learning process. It is not presented as the procedure of a specific proprietary project because the supplied offer letter and certificate do not provide project architecture or implementation details.

7. CONCEPTUAL CYBER SECURITY WORKFLOW

Scope Definition → Asset / Input Review → Threat & Risk Analysis → Authorized Security Activity → Validation → Reporting → Remediation Awareness

The workflow above provides a conceptual view of how a cyber-security task can be approached during an industry internship. It emphasizes authorization and scope, understanding assets, risk-based thinking, careful execution, validation, reporting, and improvement.

Professional Practices

- Work only within explicitly authorized scope.
- Protect confidential information and credentials.
- Validate findings before reporting them.
- Document evidence, assumptions, and limitations clearly.
- Use supervisor feedback to improve future security work.

8. EXPECTED OUTCOMES AND LEARNING

- Better understanding of Cyber Security as an applied area of Computer Science.
- Improved ability to break security-related tasks into logical stages.
- Greater awareness of threats, vulnerabilities, risk, access control, and secure practices.
- Improved analytical thinking and problem-solving skills.
- Improved professional communication, documentation, and reporting skills.
- Exposure to an industry-oriented hybrid internship environment.

Professional Development

The internship structure described in the offer letter supports learning through assigned projects and training tasks, interaction with project supervisors, and weekly performance reviews. Such a structure encourages discipline, continuous improvement, analytical thinking, and the ability to communicate security-related work clearly.

9. CONCLUSION

The Cyber Security internship at Codec Technologies Pvt. Ltd. provided an opportunity for structured learning and professional exposure. The supplied documents confirm the Cyber Security Intern designation, Pan India/Hybrid mode, assigned project-head reporting structure, and the one-month internship conducted from 24/06/2026 to 24/07/2026.

The internship can be viewed as a bridge between academic Computer Science study and professional cyber-security practice, particularly through assigned projects, training tasks, structured evaluation, supervisor feedback, professional communication, and documentation. The report intentionally avoids claiming specific security tools, exploits, vulnerabilities, platforms, or proprietary project details that are not present in the supplied documents.
